

### *PAS 1: Dietary recommendations*

**Problem:** “I have some dietary restrictions and I think that the restaurants I did went here at the University does not offer me any food that I can eat and is healthy”

**Alternatives:** “I often bring home from food but is too much time wasting the whole process of cooking and preparing the food”

**Solution:** Implement a feature within the app that allows students to input their dietary preferences, restrictions, and favorite cuisines upon setting up their profiles.

### *PAS 2: Restaurant reservations*

**Problem:** “I do not have time to make lines or to wait a lot of time for eating at some restaurants, when restaurants are very crowded, I go to faster places”

**Alternatives:** “I use to talk to my friends for asking if restaurants are too crowded or which restaurants are the faster option for eating some food”

**Solution:** Implement an Easy Restaurant Reservations feature in the app, allowing students to quickly and conveniently make reservations at their preferred restaurants directly through the app, ensuring a seamless dining experience without the stress of long wait times.
